“PMSX[®] pro Web Monitoring” – Plant control at a glance

Ratingen / Munich 30th of May, 2016

ME-Automation Projects GmbH, a sister company of Mitsubishi Electric, has introduced a new functionality called “PMSX[®]pro Web Monitoring” to expand the proven, future-oriented process control system PMSX[®]pro.

Using “PMSX[®]pro Web Monitoring” the user or operator can see all plant information at a glance. With a platform-independent mobile terminal device or web browser a secure connection can be made via Secure WebSocket. After logging in, all preselected, important LIVE data from the control system is represented on the dynamic dashboard. The various applications will resize depending on the size of the screen or monitor used. The dynamic dashboard, the real “control centre“ of “PMSX[®]pro Web Monitoring“, displays various types of information in a tiled layout. Information can be shown as numerical data, trends, bar graphs, tables or diagrams. The “Geo Chart” is especially useful for distributed systems or remote installations, giving comprehensive status and diagnostic information for each station at a glance.

Note:

See how Mitsubishi Electric is able to respond to today's automation demands:
